

Bearspaw South Feeder Main Repairs: river access

August – September 2024

Starting **Tuesday, August 27** crews will be draining the Bearspaw South Feeder Main in preparation for urgent planned repairs. This work involves releasing large volumes of dechlorinated water into the Bow River near Edworthy Park, Bowness Park and Shouldice Park.

It's expected that draining will take a minimum one day to complete, but it could extend up to three days. To facilitate safe and efficient operations, crews will be working around the clock to complete this phase of work. Additional draining may be required over the course of repairs.

River impacts

The river remains safe for floating and boating, but for the safety of residents and our crews, we ask all river users to avoid the following areas:

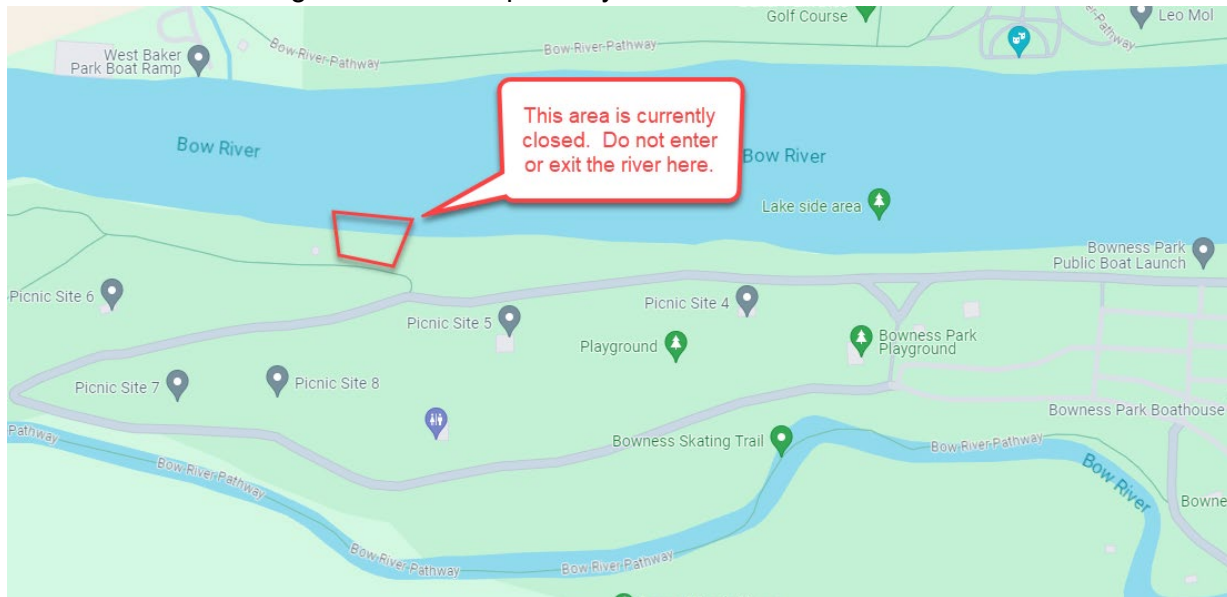

In Edworthy Park along the Bow River Pathway.

At the Shouldice Boat Ramp.

In Bowness Park along the Bow River pathway.

More Information

We thank you for your patience and understanding while we complete this important work in ensuring Calgarians have access to safe, high quality drinking water.
